Children from birth to the age of 18 are now considered academically to represent a distinct sociological and cultural class. This means that children are studied as complete individuals in their own right, separate and distinct from adults. Alison's course is multi-disciplinary in nature, covering developmental, psychological, familial and sociological aspects of children's studies. It begins by reviewing the psychological development of children and how they learn, then looks at the role of the family and the place of the child within modern family structures. The sociological aspects of children's studies review how the modern state looks after the well-being of its children in a modern society. Alison's Diploma in Children's Studies will be of great interest to all professionals who work with children or who are responsible for their well-being, and to learners who would like a career working with children in the health, social or caring professions.

Learn more about basic electrical drawings and test equipment.

Installing a safe electrical system begins with a well-planned electrical drawing. Construction projects require work drawings and specifications to guide electricians in installing electrical equipment. Besides being a customer requirement, these plans and drawings provide specific instruction to electricians. Standard symbols and lines are used to represent the different types of material, raceways, conduits, and circuit connections. Reading and interpreting these drawings accurately is therefore an important skill for electricians. This course will introduce the learner to some basic electrical drawings.
